HELPING YOUR CUSTOMERS JUST GOT EASIER

- ✓ Dropped calls.
- ✓ Choppy video conferencing.
- ✓ Sluggish web-based apps.

Your customer needs help and there's NOTHING YOU CAN DO...

You pride yourself on managing your customer's networks with expertise and skill. But not all of their Internet is under your control, so you're getting complaints about things you can't fix. It's frustrating and makes you feel helpless. Even worse, it leaves customers unhappy. Service calls rise and customer satisfaction drops.

InSpeed Quality Service™

MAKES IT EASIER TO HELP YOUR CUSTOMERS.

InSpeed Quality Service streamlines the Internet by working on top of your customer's existing network to constantly monitor traffic quality and manage throughput. It prioritizes the more demanding traffic, such as voice and video conferencing, over less real-time sensitive packets to ensure a quality customer experience all the time.

WITH INSPEED QUALITY SERVICE, SERVICE CALLS *DECREASE*, YOUR MARGINS *INCREASE* AND CUSTOMER SATISFACTION **SOARS.**

InSpeed Quality Service is simple to install and dynamically adjusts to changing network conditions, all without the intervention of any IT staff.
It automatically adapts to network and load changes, providing continuous optimization with little or no administration or user error.

KEY BENEFITS

SIMPLE TO INSTALL, MANAGE & MAINTAIN

- Install in-line with a site's commodity Internet WAN connection(s).
- Deploys in minutes with minimal IP address configuration.
- Continuously monitors traffic quality and dynamically manages throughput to prevent buffer bloat and keep latency, jitter and packet loss low.

FASTER CLEARING OF NETWORK CONGESTION

- Eliminate dropped calls, choppy voice, video conferencing freeze & slow-loading web-based apps
- InSpeed Quality Service manages the entire traffic flow (hardware and cloud) in both directions.
- It prioritizes important packets (voice and video conferencing) over ordinary Internet traffic entering and exiting the site.

MAINTAIN BUSINESS CONTINUITY

- InSpeed Quality Service was purpose built to reduce voice latency (delay and echo), while at the same time reducing traffic congestion
- 100% uptime for critical business applications because InSpeed Quality Service supports multiple WAN connections that are carrier independent.

IMPROVE ROI

- Experience the promise of quality broadband without the expense of MPLS or other private circuits.
- Improve customer retention by installing, managing and billing as your own service.
- Full bandwidth is included, and we maintain lowest bandwidth overhead in the industry.

About InSpeed Networks
InSpeed Networks is the leading supplier of SD-WAN solutions purpose-built for voice and video. High quality voice calls, smooth video conferencing, and responsive applications are now possible over any WAN connection, even commodity broadband Internet. Easy to install, auto-calibrating, and inherently secure, the InSpeed Quality Service solution introduces a new paradigm in WAN connectivity for single- and multi-site SMBs.
