FindIT Network Management

CISCO

Afraid of what's going on in your customer's network?

FindIT can shine a light.

As small businesses move rapidly toward digitalization, their networks are becoming more complex while ongoing management and operation require substantial time and resources. This puts demand on you and your team.

Designed for small business in mind, Cisco FindIT Network Management will shine a light so you can deliver better user experience while significantly reduce customer downtime. Other network management tools are built and priced for larger enterprises. FindIT gives you an affordable way to deploy, configure, and monitor customer networks built on Cisco Small Business series switches, routers and access points.

Deliver improved user experience and significantly reduce customer downtime

Remote multi-site management with multi-tenant support

Monitoring and alerting RMM & PSA integration

TOOLS

Lifecycle management (software update, warranty, EOL)

Easy network management

✓ Single interface for entire customer networks

✓ Zero-touch deployment

✓ Identify the problem before it affects your customer
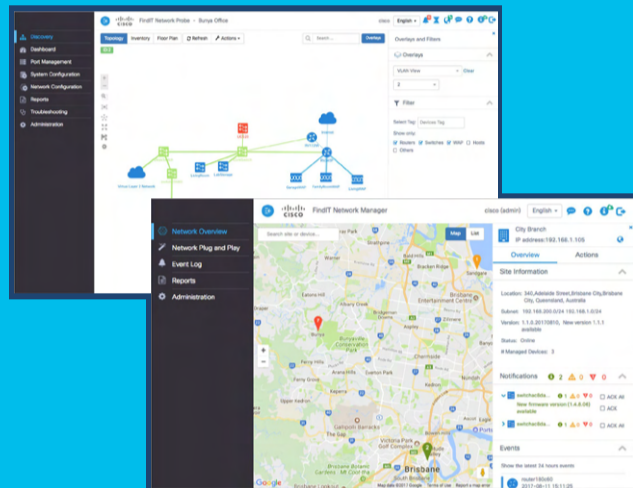

How FindIT works

Install a Probe at each site
- Probe automatically discovers network
- License required for 10 or more devices being managed (more info later)

Install Network Manager to manage multiple sites
- Can be anywhere in network or Internet
- Provides summary info and alerts for each site

Connect directly to Probe or via Network Manager if remote

FindIT Network Manager

FindIT Embedded Probe

FindIT Probe
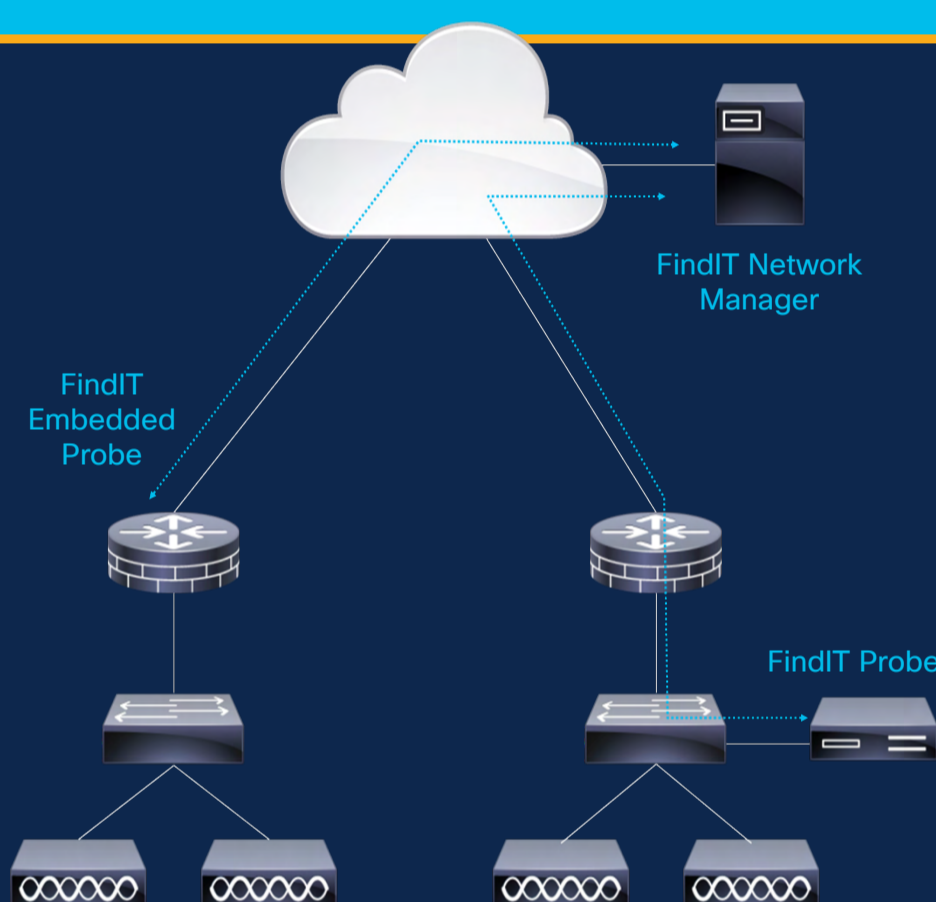

## Discover, monitor and configure your network from a single interface

1. Discover

Automatically discover network
- Device detail
- Network topology
- Network health

Intuitive graphical-based interface

View of non-Cisco network devices

2. Monitor

Real-time monitoring of network performance

Customize to view what matters to you

3. Configure

Single pane of glass for common network configurations
- VLANs and WLANs
- System configuration
- Switch ports

Network-based configuration – configure once for all devices

4. Report

End-of-life and maintenance reporting

Integrate with Cisco® Active Advisor for additional lifecycle tools
